Pro-Fit Innovations

Pro-Fit Innovations

The New Pro-Jig is designed to be compact and very simple to use
All the features have been designed to work with a standard 30 mm
guide bush and a 12.7 mm straight worktop cutter .

- Quick to setup jig and compact design
- Works with std 30 mm guide bush in conjunction with 12.7 mm straight router cutter
- Jig zeroed to your router with your first cut
- Notch area designed to trim a right angle to allow plinths to pass end panels
- Built in trammel with 2 adjustment slots also included fixed privet and locking parts
- 90 Degree and 45 Degree peg positions
- 1 no work top bolt jig and peg positions 2 No pegs included
- Point to point straight edge simple to use
- Sharp edge remover allows work top edging to smoothly pass external angles
- 35 mm hole and specially designed zero bung to assist in setting up the jig .
- 2 no countersunk through holes for screw fixing

What can you do with it

- Create internal and external curves with easy adjustments, Circles . Sink cutouts with rebates for clips .
- Create the perfect right angle notch in an end panel with no chips and square cut . Can be used to cut out sockets .
- Easy accurate wall end panel trimming for wrap round panels etc . Plinth joints clean square cuts .
- Cut work top bolt holes great feature for working on smaller tops.
- Mitre cuts on Architrave etc .
- Cut out sink tap and hinge positions with pinpoint accuracy using our latest development centre zero bung .
- Create trenches in wrap rounds for cables etc .
